PRTS strengthens relationship

Having dealt with the many facets of a changing business for over 20 years, PRTS has strengthened its relationship with United States powerhouse, ThermoFisher Scientific.

Formerly known as Ramsay (and further evolving to ThermoGamma Metrics) their broad range of bulk handling products have been added to the long standing and sturdy offering of Nucleonic density gauges and analysers.

After visiting their factory in South Australia late in 2014, we have come to appreciate the reasons 'why'.

With a team of R&D Engineers based in Minnesota, offering engineered solutions for Tramp Metal Detection, Calorific Content Analysers, Trade Certified Belt Weighing Systems and much more.

With a complement of ancillary products in weighing and conveyor systems, PRTS are the one stop shop for conveyor Instruments in Nth Queensland.

Due to market demand, Thermofisher have re-instated their ever popular AM870 Nucleonic Density Gauge! Contact our helpful Sales team to discuss new applications, source return or spare parts.

Lambrecht launch the rain[e]

The latest in weighing technology, combined with a self-emptying precision bucket, the rain(e) offers high resolution and high precision in a very small package. Measurement begins with the very first drop.

The rain(e) is ideal to set up a new measurement system or as an addition to an existing measurement network.

- amazing resolution and accuracy
- Verification of sensors with tipping bucket and other weighing systems
- compact and robust construction with a
- all-metal housing, weatherproof and durable
- excellent connectivity by several interfaces
- installation and maintenance are extremely simple

Upcoming Events

Ergon
Energy Saver Workshop
10th September - Mackay
Oktober Fest
9th October - PRTS
S7-1500
November - Mt Isa

We want to meet you at the IICA Technology Expo

Join us and a host of quality Instrumentation Vendors - **Wednesday 16th September** at Jupiters Casino.
