

Profile Style

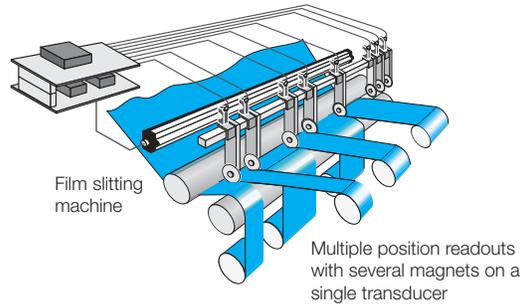

Balluff Micropulse® linear position transducers in the Profile-style housing are a rugged, wear-free alternative to other linear feedback devices such as wear-prone potentiometers, expensive and fragile glass scales, and limited-stroke LVDT's. Environmentally sealed to IP67, and utilizing either a sliding captive magnet or a free-floating magnet, the Profile housing Micropulse® transducer provides highly accurate linear position feedback in demanding, harsh industrial applications.

Features/Advantages:

- Non-contact absolute position feedback
- IP67, highly resistant to contamination
- Wear free
- High immunity to shock and vibration
- Direct replacement of lower grade linear feedback devices
- Captive or floating magnet

Outputs:

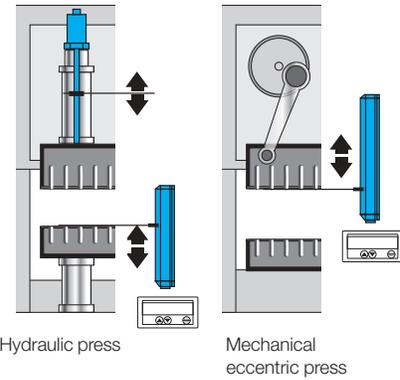

- Analog
- Digital Pulse
- SSI
- CANopen
- Profibus

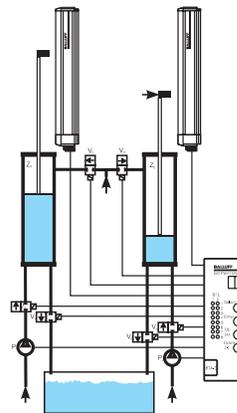

Applications:

Balluff transducers offer features which assure reliable operation in many areas of automation and process technology, even under extreme ambient conditions:

- Hydraulic cylinders
- Tooling and tool handling
- Presses
- Casting and rolling mills
- Foundries
- Injection molding
- Leveling machines
- Transport systems
- Lift controls
- Level monitoring
- Tunnel boring equipment
- Die casting machinery
- Portal robots
- Woodworking machinery
- Flight simulators
- Cutting/slitting machinery
- Conveying
- Packaging machines
- Windmills
- Elevators
- Forestry

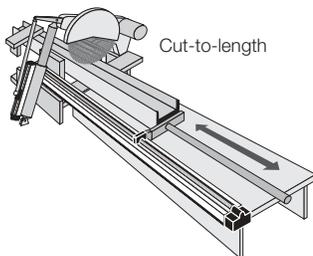

Speed up die changes with digital display of shut height and parallelism

Autotuning Circuitry

Patented Autotuning circuitry in Balluff Micropulse® transducers automatically compensates for changes in the strength of the magnetostrictive return signal.

- Automatically compensates for changes in temperature, providing a more stable signal over a wide temperature range.
- For Micropulse profile-style transducers using a floating magnet configuration, Autotuning ensures that the return signal remains stable, even if the distance from magnet to transducer varies.

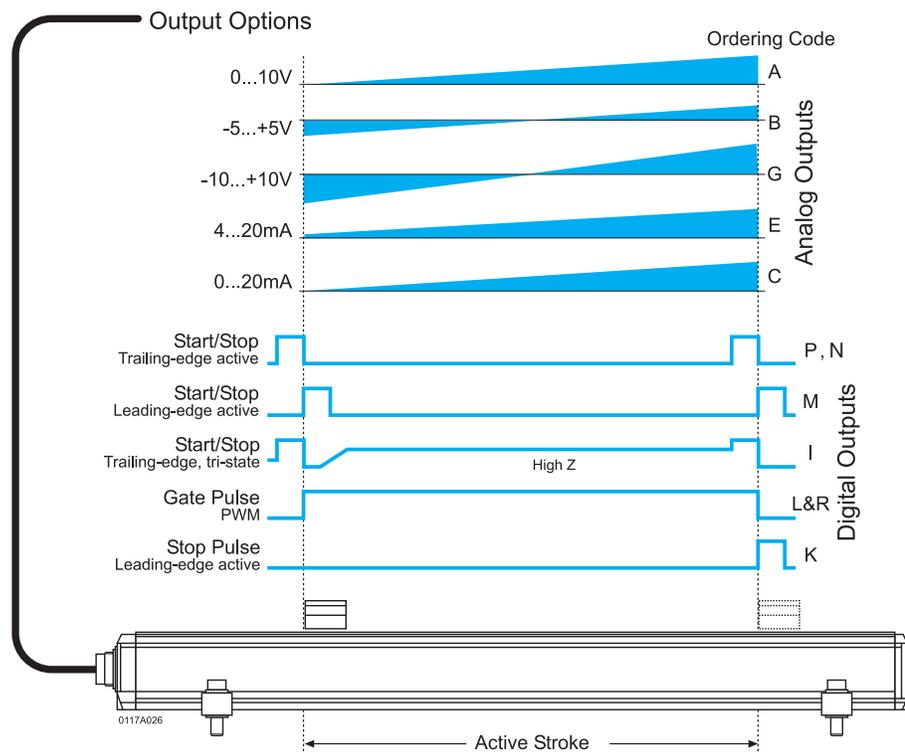

| Electrical interface | Analog | Analog | Digital |
|----------------------------|---|---|---|
| Electrical type | Voltage | Current | Start/Stop & PWM |
| Part No. Code (See Pg. 68) | A, B, G | E, C | P, M, N, I, L, R, K |
| Output | 0...+10V, -5...+5V, -10...+10V | 4...20 mA, 0...20 mA | Start/Stop or Pulse-width-modulated (RS422/RS485) |
| Output load | >2KΩ (5 mA max) | <500Ω | per spec |
| Resolution | <0.1 mV | <0.2μA | Controller dependent |
| Non-linearity | ±100μm to 500mm stroke, ±0.02 % over 500mm stroke | ±100μm to 500mm stroke, ±0.02 % over 500mm stroke | ±100μm to 500mm stroke, ±0.02 % over 500mm stroke |
| Repeatability | Resolution/ min 2μm | Resolution/ min 2μm | Resolution/ min 2μm |
| Hysteresis | 4μm | 4μm | 4μm |
| Sampling rate | 500 Hz stroke >2000mm 1KHz stroke <2000mm | 500 Hz stroke >2000mm 1KHz stroke <200mm | 500 Hz stroke >2000mm 1KHz stroke <2000mm |
| Temperature coefficient* | [150μV/°C + (5ppm/°C*P*V/NL)] * ΔT | [0.6μA/°C + (10 ppm/°C*P*V/NL)] * ΔT | (6 μm + 5 ppm*NL) /°C |
| Operating voltage | 24 Vdc ±20% or 15 Vdc ±2% | 24 Vdc ±20% or 15 Vdc ±2% | 24 Vdc ±20% or 15 Vdc ±2% |
| Operating current | <150mA (at 1K Hz sampling rate) | <150mA (at 1K Hz sampling rate) | <150mA (at 1K Hz sampling rate) |

Notes:

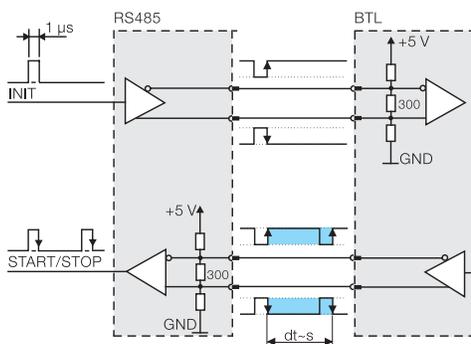

Analog voltage output versions incorporate both rising and falling outputs. Analog current version must be ordered as rising or falling outputs.

*Temperature coefficient variables:

- V = output range in V
- I = output range in [mA]
- ΔT = temperature change
- P = magnet position
- NL = stroke length

Analog and Digital Output Options for the Micropulse P Style

RS485 signal transmission with digital outputs

CANopen

This interface provides an efficient connection to machines using CANopen. Features include:

- Process data objects incorporating position, velocity and set-point information
- Emergency object for set-points
- Service data objects for configuring transducer modes
- Synchronization objects for network wide activities

Profibus

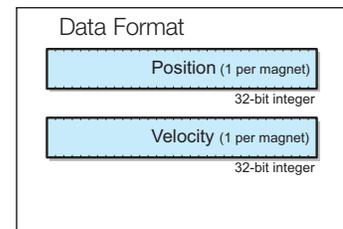

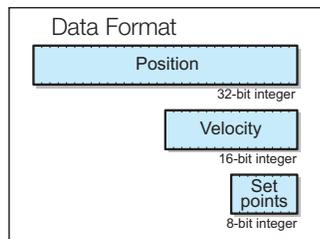

This interface provides an efficient connection to machines using Profibus. Features of this interface include:

- Single telegram message for fast updates even with 4 magnets
- Operates at 12 Mbps
- GSD file provided to configure telegram message
- Sync and Freeze functions available for coordination between other devices

| Ordering Code | H | T |
|---|---|---|

 Bus out: 5-pin female, M12

SSI

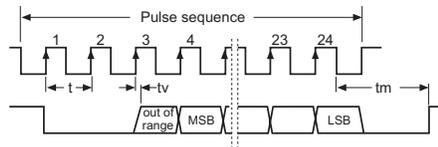

The SSI (synchronous serial interface) output interfaces with popular control systems from manufacturers such as Allen-Bradley, Siemens, Parker and many others. Cable spans can be up to 400m with noise free operation. Individual EEPROM linearization of this interface makes it ideal for applications requiring the best accuracy available.

| Ordering Code | S |
|---|---------------------------------------|
| Resolution | 1, 2, 5, 10, 20 or 40µm |
| Non-linearity | ±30µm or ±2LSBs, whichever is greater |

- KA15 = 15m PUR cable

Quadrature

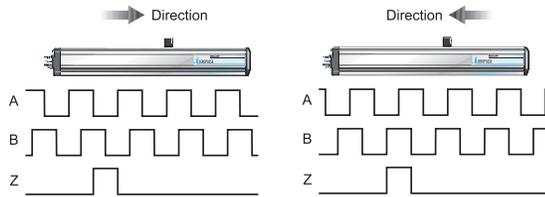

The quadrature output interfaces directly to standard encoder inputs (90° out of phase, A & B). This configuration gives you more interface options for connecting to motion based systems. Operating modes can be either free-running or synchronous (switch selectable) depending on the control system's requirements.

- Remotely triggered Burst Mode rapidly delivers accumulated pulse string for absolute information upon demand, eliminating the need to re-home after a power loss or other cycle interruption.
- Operates in either synchronous or free-running modes
- Selectable position resolution (1, 2, 5, 10, 50 µm or 0.001", 0.0005", 0.0001")
- Selectable pulse frequencies (10, 208, 416, 833 kHz)

Micropulse P Style

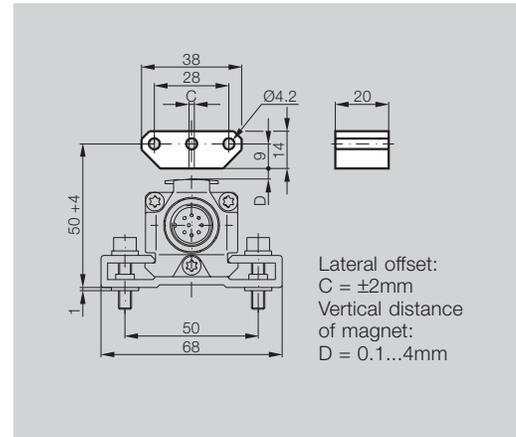

Floating Magnets

Balluff magnets are available in captive or floating styles. All BTL5 magnets shown here can be used on any Balluff Micropulse transducer.

The BTL5-P-3800-2 magnet can be used with a vertical offset from the upper surface of the transducer body of 0...4mm, and the BTL5-P-5500-2 permits a distance of 5...15mm. The BTL5-P-4500-1 is an electromagnet and requires a supply voltage of 24V, which can be turned on and off for selective activation. This allows multiplex operation with multiple magnets on a single transducer, since only one magnet is active at a time.
