

## 2-WIRE PROGRAMMABLE TRANSMITTER

- RTD, TC, Ohm, or mV input
- Extremely high measurement accuracy
- Version with galvanic isolation
- Programmable sensor error value
- For DIN form B sensor head mounting

### Application:

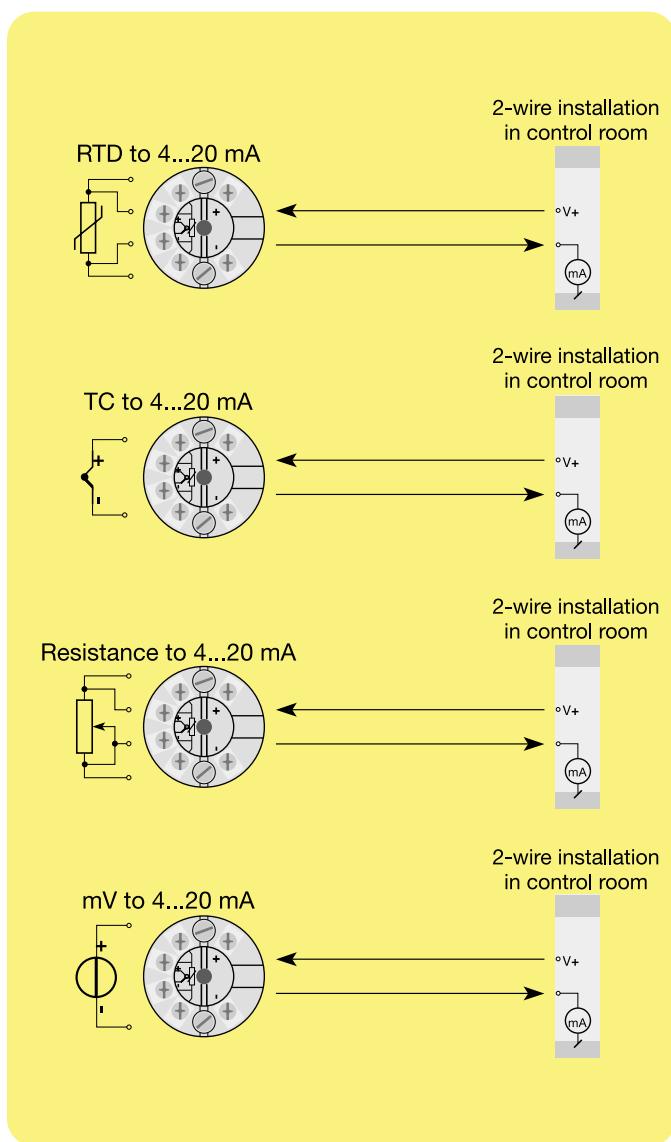

- Linearised temperature measurement with Pt100...Pt1000, Ni100...Ni1000, or TC sensor.
- Conversion of linear resistance variation to a standard analogue current signal, for instance from valves or Ohmic level sensors.
- Amplification of a bipolar mV signal to a standard 4...20 mA current signal.

### Technical characteristics:

- Within a few seconds the user can program PR5331A to measure temperatures within all ranges defined by the norms.
- The RTD and resistance inputs have cable compensation for 2-, 3- and 4-wire connection.
- Continuous check of vital stored data for safety reasons.

### Mounting / installation:

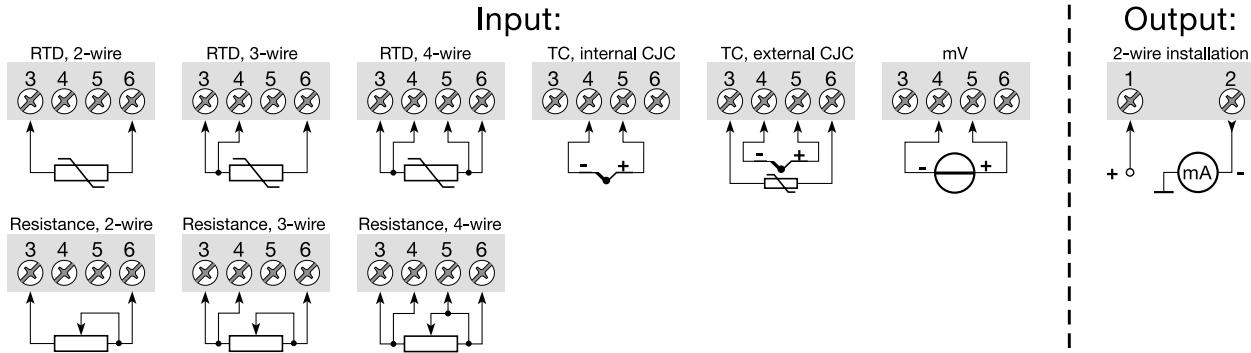

- For DIN form B sensor head or DIN rail mounting with a special fitting.
